katronic

KATflow 210 Integrated Clamp-On Ultrasonic Flowmeter

ROUGH. ROBUST. REMOTE.

The KATflow 210 is a portable flowmeter designed for situations which require a reliable flow measurement regardless of the conditions in which it needs to be operated. With its advanced battery technology and durable waterproof housing the instrument is intended for long-term installation in remote areas where access to power is limited and exposure to the worst of elements is likely. This device has been further enhanced by the inclusion of a specially manufactured IP 68 version of the K1N stainless steel transducers which increases shock protection and ensures this ruggedised package provides the perfect balance of reliability, robustness and autonomy.

THE TECHNOLOGY BEHIND THE MEASUREMENT

The KATflow non-invasive flowmeters work on the transit time ultrasonic principle. This involves sending and receiving ultrasonic pulses from a pair of sensors and examining the time difference in the signal. Katronic uses clamp-on transducers that are mounted externally on the surface of the pipe and which generate pulses that pass through the pipe wall. The flowing liquid within causes time differences in the ultrasonic signals, which are then evaluated by the flowmeter to produce an accurate flow measurement.

The key principle of the method applied is that sound waves travelling with the flow will move faster than those travelling against it. The difference in the transit time of these signals is proportional to the flow velocity of the liquid and consequently the flow rate.

Since elements such as flow profile, type of liquid and pipe material will have an effect on the measurement, the flowmeter compensates for and adapts to changes in the medium in order to provide reliable results. The instruments can be used in a variety of locations, from measurements on submarines to installations on systems destined for use in space, and on process fluids as different as purified water in the pharmaceutical sector and toxic chemical effluent. The flowmeters will operate on various pipe materials and diameters over a range of 10 mm to 6,500 mm.

Sensors *a* and *b* work alternately to send and receive ultrasonic pulses. The sound waves *ab* travelling with the flow move faster than those travelling against it *ba*.

SPECIFICATION

- Pipe diameter range 25 mm to 2,500 mm
- Temperature range for sensors -30 °C to +130 °C (-22 °F to +266 °F)
- Rugged integrated IP 67 portable design
- Weight 6 kg
- Selectable three-line LCD display and full keypad
- Battery life up to 100 days with rapid charging

FEATURES

- Three different operating modes to maximise battery life
- Process output options including current, opencollector, relay
- Compact housing 260 (h) x 280 (w) x 200 (d) mm
- IP 68 stainless steel sensors, cable and connectors as standard
- Large data logger and software for sampling and data transfer
- Innovative installation wizard for quick and intuitive programming

ACCESSORIES

- Optional wireless data transmission
- KATdata+ software for data evaluation
- Optional pipe wall thickness gauge

APPLICATIONS

- Long-term leakage surveys
- Metering in pits, wells and areas where flooding is likely
- In-line flowmeter inspection verification
- Metering of pipes in exposed locations
- Temporary replacement of conventional in-line flowmeters

FLOWMETER

Performance

Measurement principle	Ultrasonic transit-time difference
Flow velocity range	±0.01 25 m/s
Resolution	0.25 mm/s
Repeatability	0.15 % of measured value, ±0.015 m/s
Accuracy	Volume flow: ±1 3 % of measured value depending on application ±0.5 % of measured value with process calibration
	Flow velocity (mean): ±0.5 % of measured value
Turn down ratio	1/100 (equivalent to 0.25 25 m/s)
Measurement rate	100 Hz (standard)
Response time	1 s
Damping of displayed value	0 99 s (selectable by user)
Gaseous and solid content of liquid media	< 10 % of volume

Images

KATflow 210 (dimensions in mm)

General

Enclosure type	Portable
Degree of protection	IP 67 according to EN 60529
Operating temperature	-10 +60 °C (+14 +140 °F)
Housing material	Polyproylene Copolymer
Measurement channels	1 standard (2 on request)
Calculation functions	Average, difference, sum, maximum (dual-channel use only)
Power supply	1, 2 or 3 x LiFePo4 12.4 Ah
	Power adapter: 100 240 V AC input, 9 V DC output
Operating time	1 battery pack - up to 7 days continuous operation, 30 days in saver mode*
	2 battery packs - up to 14 days continuous operation, 60 days in saver mode*
	3 battery packs - up to 21 days continuous operation, 100 days in saver mode*
Display	LCD graphic display, 128 x 64 dots, backlit
Dimensions	260 (h) x 280 (w) x 200 (d) mm
Weight	Approx. 6 kg
Operating languages	English, French, German, Dutch, Spanish, Italian, Russian, Czech, Turkish, Romanian (others on request)

* Based on normal operating conditions, with no process outputs enabled.

Communication

Type Transmitted data	USB cable Measured and totalised value, parameter set and configuration, logged data	
Internal data logger		
Storage capacity	Approx. 30,000 measurements (each comprising up to 10 selectable measurement units), logger size 5 MB Approx. 100,000 measurements (each comprising up to 10 selectable measurement units), logger size 16 MB	
Logged data	All measured and totalised values, parameter sets	
KATdata+ software		
Functionality	Download of measured values/parameter sets, graphical presentation, list format, export to third party software, online transfer of measured data	
Operating systems	Windows 8, 7, Vista, XP, NT, 2000 Linux	
Quantity and units of measurement		
Volumetric flow rate	m³/h, m³/min, m³/s, l/h, l/min, l/s USgal/h (US gallons per hour), USgal/min, USgal/s bbl/d (barrels per day), bbl/h, bbl/min	
Flow velocity	m/s, ft/s, inch/s	
Mass flow rate	g/s, t/h, kg/h, kg/min	
Volume	m³, l, gal (US gallons), bbl	
Mass	g, kg, t	
Heat flow	W, kW, MW (with heat quantity measurement option)	
Heat quantity	J, kJ, kWh (with heat quantity measurement option)	
Temperature	°C (with heat quantity measurement option)	
Process outputs* (galvanically isolated)		

Current	0/4 20 mA active (R $_{\rm Load}$ < 500 Ω), 16 bit resolution, U = 30 V, accuracy: 0.1 $\%$
Digital open-collector	Value: 0.01 1000/unit, width: 1 990 ms, U = 24 V, I _{max} = 4 mA
Digital relay	Form A SPST (NO), U = 48 V, I _{max} = 250 mA

* Further process outputs available on application.
